

# Regional transport of biomass burning products to Buenos Aires by the South American Low Level Jet

Ana Graciela Ulke

Depto. de Cs. de la Atmósfera y los Océanos

Facultad de Cs. Exactas y Naturales - Universidad de Buenos Aires

Buenos Aires - Argentina

email: [ulke@at.fcen.uba.ar](mailto:ulke@at.fcen.uba.ar)

## ***General objectives:***

---

- Assess the air quality in Buenos Aires
  - Source of urban air pollution
  - Receptor of regional pollution
- Atmospheric circulation patterns
  - dispersion mechanisms

## ***Specific objectives:***

---

- Study the contribution of biomass burning to the regional pollution in BA
- Analyze the role of the South American Low Level Jet (SALLJ) as transport mechanism

## *Questions:*

---

- How often do the regional plumes reach Buenos Aires?
- Do they significantly affect the air quality in the city?
- Is there any particular circulation pattern that contributes to the transport?.

# Summary

---

- The CJ is the main regional transport mechanism of biomass burning products in SESA,
- It was found:
  - an increase in the aerosol load in the atmospheric column in BA,
  - a significant difference between the mean AOT for the sub samples CJ1 and no\_CJ1 and CJ1\_BB and CJ1\_NBB (2001-2005).

Acknowledgments: Thanks are due to Brent Holben for the AERONET data. NCEP is acknowledged for the meteorological fields and the Center for Weather Forecast and Climate Prediction for the outputs of the CATT-BRAMS model. This research was funded by UBACyT X224.
