Laboratório Nacional de Computação Científica

Ministry of Science and Technology

National Laboratory of Scientific Computing

GRADUATE PROGRAM COMPUTATIONAL MODELLING

Computational Modeling

- Observation
- Physical model
- Mathematical model
- Mathematical Analysis of the solution
- Numerical model
- Results: validation and interpretation

Background Information

LNCC was created in 1980 under the sponsorship of the Ministery of Science and Technology. Facilities are located in the city of Petrópolis, State of Rio de Janeiro since 1998.

•LNCC is one of the 14 research units of the Ministry of Science, Technology and Innovation.

- LNCC is a reference in Scientific Computing in Brazil.
- Focus on High-performance Computing and Computational Modeling in the Sciences and Engineering:
 - Providing Computing Facilities, systems and networking, to the National Academic and Research Community.
 - Promoting R&D on Methodological and Application subjects.
 - Offering an innovative graduate program in Computational Modeling.

DISTRIBUTED AND HIGH PERFORMANCE COMPUTING

Scientific Distributed Computation, Computer Networking, Massive Parallel Computation, Massive Data Storage, Quantic computation and information, Scientific Visualization, Collaborative Virtual Environments and Virtual Reality.

COMPUTATIONAL BIOLOGY

Bioinformatics, Molecular Modeling of Biological Systems, Modeling and Numerical Methods in Biossistems, Numerical Ecology, Computational Neurociences and Biology

COMPUTATIONAL MODELING OF OIL RESERVOIRS, GROUNDWATER AND CO2 CAPTURE AND STORAGE Groundwater contamination, Injection and storage of carbon dioxide in the geological structure of the pre-salt., Hydro-geomechanic coupling in the advanced recovery of oil in the pre-salt; Stochastic modeling of multiscale processes in heterogeneous reservoirs

MEDICINE ASSISTED BY SCIENTIFIC COMPUTATION

Modeling of human physiological systems: application to diagnose, treatment and planning of chirurgical processes

in the arterial system. Computational applications to the Heath Care System

STOCHASTIC AND ROBUST METHODS IN MODELING, ESTIMATION AND CONTROL AND APPLICATIONS

Markovian decision problems and applications in stochastic networking; Modeling, signal estimation and control of complex systems: robotic, heavy traffic, economical and financial systems, population dynamics, sound synthesis/analysis.

MATHEMATICAL AND NUMERICAL METHODS APPLIED TO ENGINEERING AND SCIENCES

Discretization, Asymptotic and Numerical Analysis of Partial Differential, Topological Sensitivity Analysis, Mathematical and Numerical Analysis in Fluid Mechanics, Control and Applications and Dissipative Dynamical Systems, Uncertainties quantification, verification and validation, Modeling, analysis and simulation of transport phenomena, Thermally coupled flows, Interface Problems, Meta-heuristics and Applications

COMPUTATIONAL MODELING OF KNOWLEDGE DIFFUSION

Development of Mathematical Models for Knowledge Diffusion, Simulation of Public Policies in Science, Technology and Innovation, Representation of Knowledge in Ontologies

GRADUATE PROGRAM COMPUTATIONAL MODELLING

MOTIVATIONS

- Science Trend Towards Synthesis Of Knowledge
- Matching Labor Market Requiring a Broader Education Profile
- Large Spectrum Capacity Building Rather Than Specialization
- Modeling of Natural Phenomena
- Computation Intensive
- Interdisciplinary
- Mix Of Students From Different Backgrounds
- Currenty 45 MSc and 49 PhD students
- 52 MSc and 45 PhD finished the program since 2001

NATIONAL SYSTEM OF HIGH PERFORMANCE COMPUTING

Each CENAPAD (8 regional centers) has now:

• Aprox. 600 nodes/center

•Users have their own storage systems

•Total power: 120 Tflops and 2.5 PB storage.

LNCC Incubator 9 enterprises .

Atualmente a Incubadora LNCC possui nove empreendimentos e uma empresa graduada. São eles:

DTEE

Trabalham na criação de soluções de software abrangentes e convergentes com alto valor agregado para dispositivos móveis e internet, para atuar no mercado da América latina de entretenimento, marketing digital e produtividade.

Serviço de consultoria em meteorologia

comunicação, construção civil, trânsito e

Projeto que consiste no desenvolvimento

de um sistema de dispositivos eletrônicos

de telemetria para redes de distribuição

com soluções para os setores de

agronegócio, florestal, mídias de

transporte, e turismo.

de energia elétrica (DTEE).

E3rane

Atua no ramo de inteligência de negócios, desenvolvendo serviços que visam a descoberta de informações em bancos de dados.

Criada no final de 2008, é uma empresa que atua na área de tecnologia ligada à telefonia celular e internet, associada à produção de fonogramas ligados às tradições dos ritmos e folclore de nosso país. Atua no desenvolvimento de jogos para dispositivos móveis. Possuem também uma plataforma de desenvolvimento de advergames, que são jogos criados para divulgação de nomes e marcas.

A Aprendanet se propõe a integrar educação – ciência - inovação via TI e produção de massa individualizada via Web 2.0.

Recentemente incorporada pela Technology &Trasining, a empresa BFX entrou na Incubadora LNCC em março de 2009, e atua no mercado de Entretenimento Digital, e na área de projetos de simuladores virtuais.

Criada em dezembro de 2008, está desde fevereiro de 2009 na Incubadora LNCC, e tem como principal produto o atendimento com vídeo ao vivo.

Equipe de desenvolvimento baseado na linguagem Lua para dispositivos móveis baseados no framework Kepler; além de produtos para TV Digital, Novas Interfaces de Controle e Jogos.
