Description:

From the Back Cover

Utilizing the more advanced features of the Data Web Controls has many developers stumped. These controls are fairly simple to use when it comes to simple data display. However, they can do much more than merely present data. For example, the DataGrid Web Control allows for sorting, paging, and editing of data. In addition, these controls allow for templating of data, which can be used to provide more complex views. The DataGrid, DataList, and Repeater forum on the Microsoft ASP.NET Forums received more than 2,100 posts in the first month and a half of use, or over 35 posts per day

on average. As the Web master of an ASP.NET Web site, Scott has also received numerous emails from readers and visitors asking questions about these Web Controls. ASP.NET Data Web Controls is likely to be an indispensable item in every ASP.NET developer's toolbox.

About the Author

As editor and main contributor to 4GuysFromRolla.com, a popular ASP/ASP.NET resource Web site, **Scott Mitchell** has authored hundreds of articles on Microsoft Web Technologies since 1998.
