

Science Highlights Guidelines

The Science highlights section of the CLIVAR website is intended to feature CLIVAR-related research that has been published, with an emphasis on recent and interesting findings, and to share these highlights with the broader scientific community. In general, the research to be highlighted should be either coordinated or participated by CLIVAR members. However, for some exceptional cases, the advanced research findings that are of high relevance to CLIVAR sciences and are recommended by CLIVAR panels/RFs/SSG and/or WCRP could also be considered as Science Highlights.

What topics are suitable?

- Timely research: findings that have been published within 6 months
- Must be relevant and contribute to CLIVAR objectives

What is the format?

- A short synopsis featuring the major finding(s), approximately 200-350 words
- Title that reflects the highlight, but is not identical to the publication
- Must include one figure/table/picture and a caption (Note: all images must come with approved copyright and reproduction/use permissions)
- Language and style must be accessible to a science-educated audience, but not necessarily within your own field of expertise
- Link to the original research publication or website
- List of all authors on original research or publication (Note: publication's lead author **does not** have to be the contributor for the highlight)
- The International CLIVAR Project Office will review all submissions and provide editorial revisions for clarification, style, and accuracy.
- Once the ICPO staff has identified the article and contributor from the panel, a request regarding the potential contribution and a suggested timeline for submission will be sent. The author of the highlight will have final approval of all editorial revisions.
