How Scientists Got Climate Change So Wrong

Few thought it would arrive so quickly. Now we're facing consequences once viewed as fringe scenarios.

By Eugene Linden

Larger bandwidth
Uncertainty increased
→ Deep uncertainty

Changing Estimates of Sea Level Rise by 2100

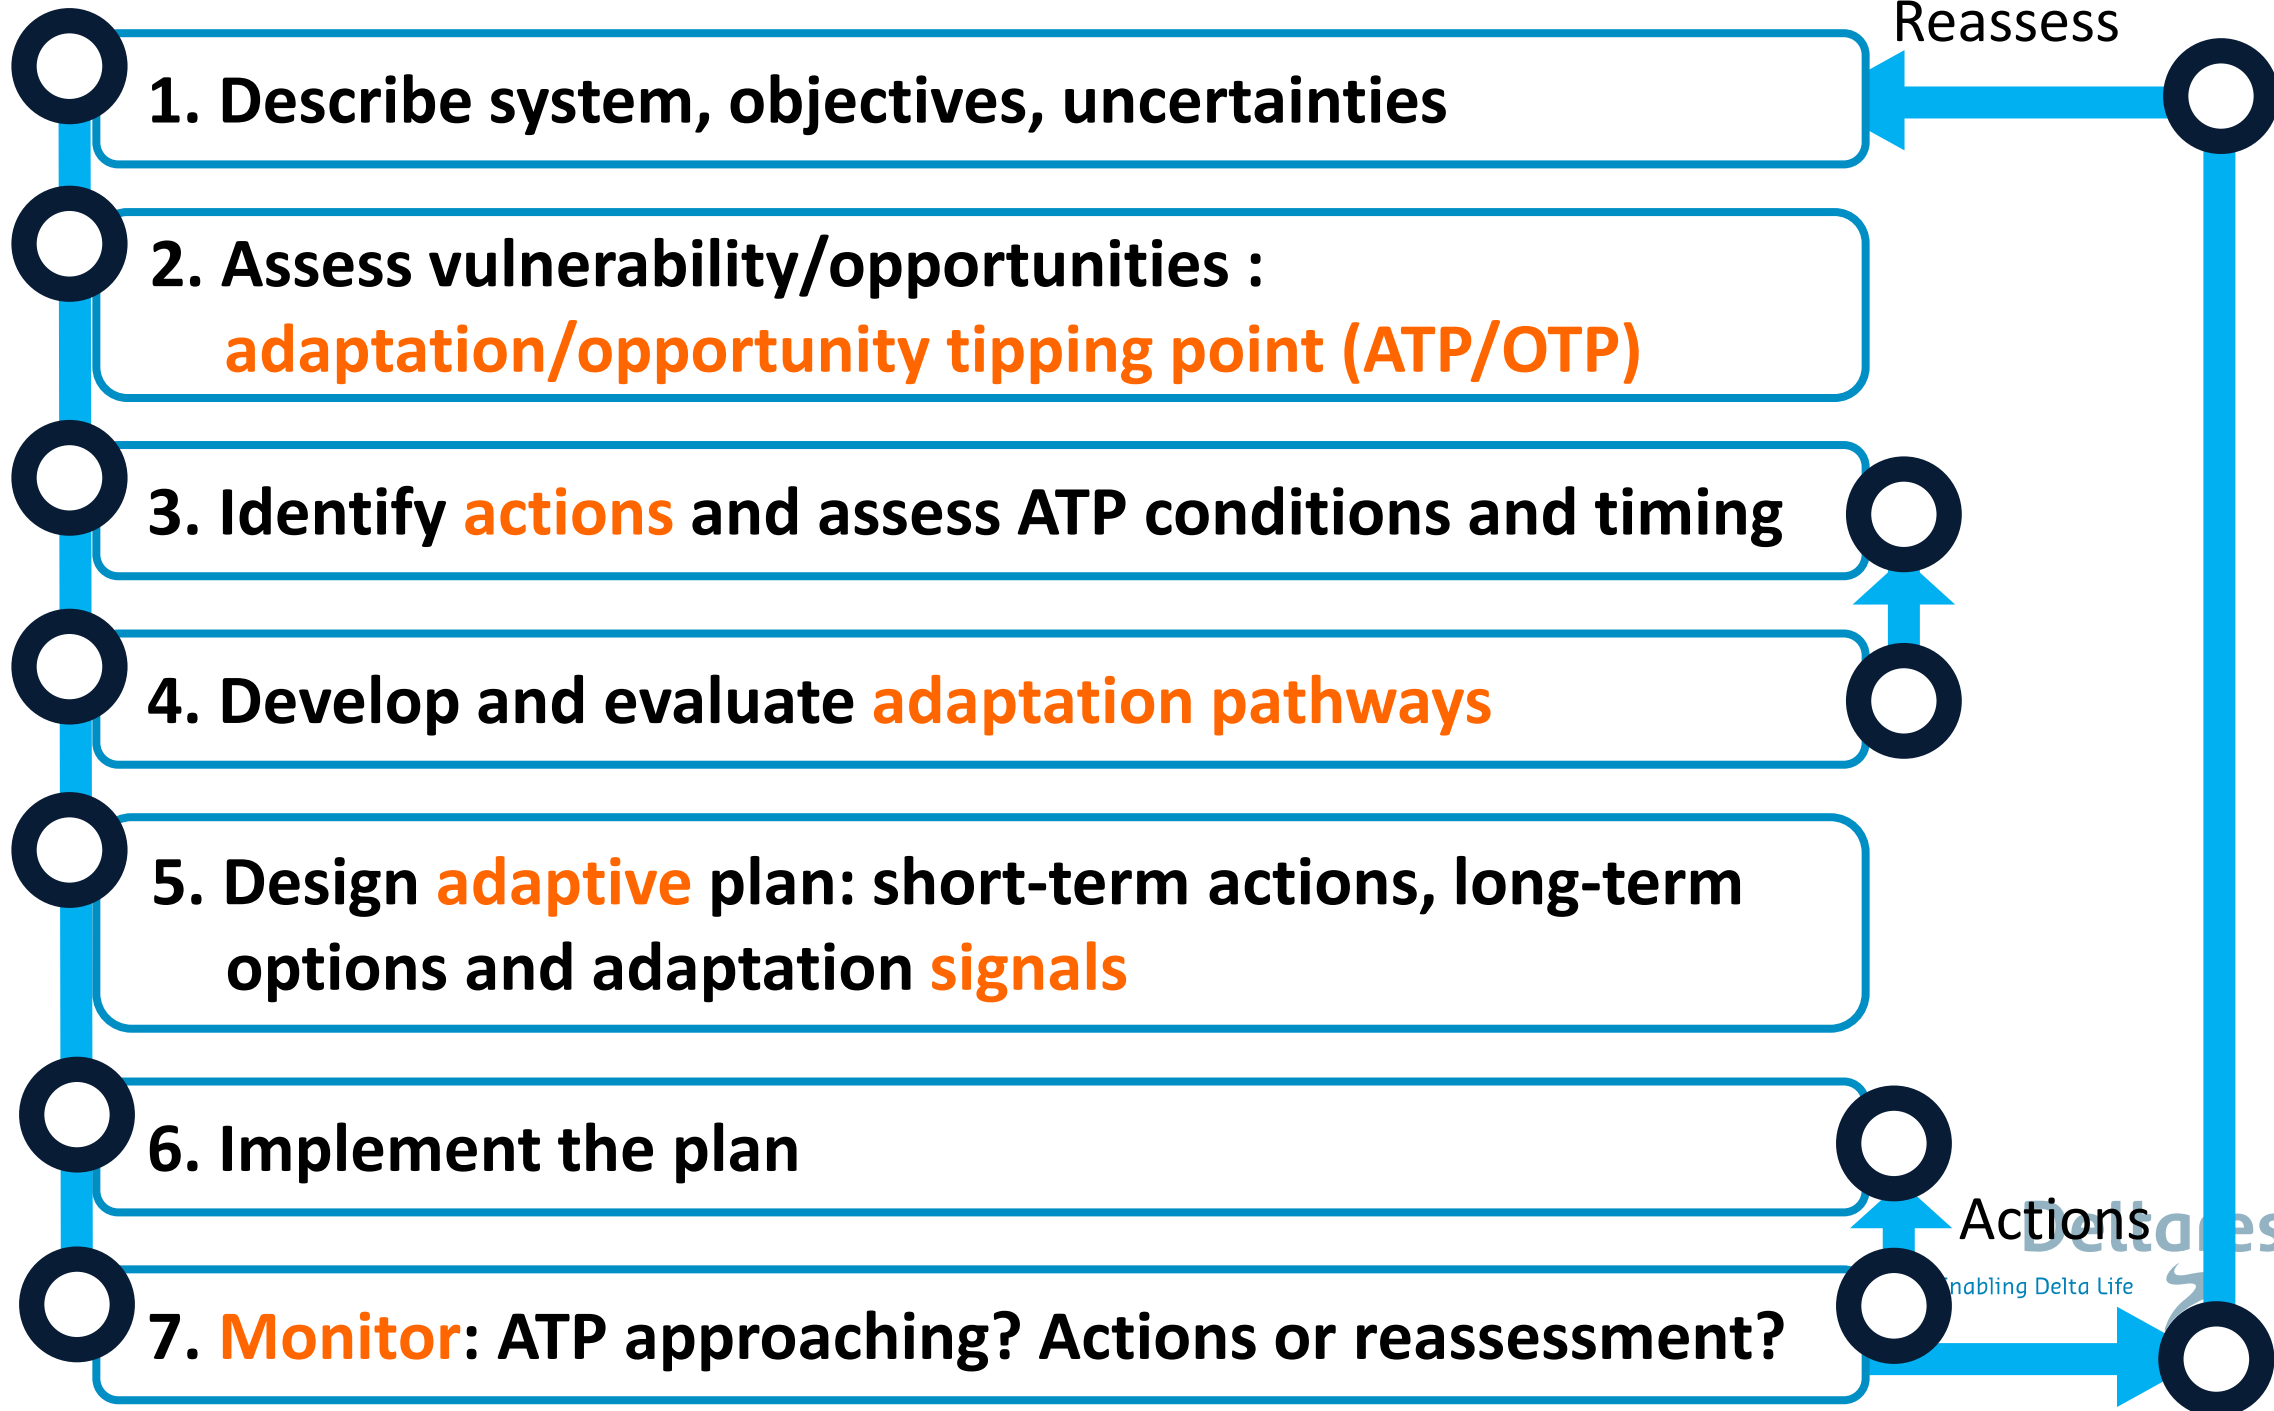

Note: The I.P.C.C.'s 2007 estimate of future sea level rise did not include satellite data on the contribution of melt water from Greenland and Antarctica because of disagreements among scientists.

Dynamic Adaptive Policy Pathways

When, how (much), how fast to adapt?

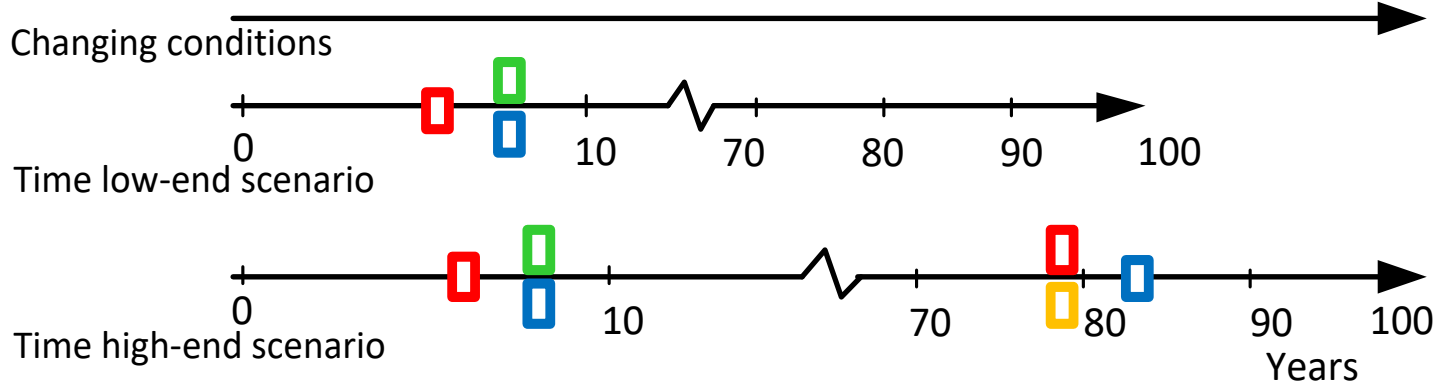

**How to enable socio-economic developments
under climate change?**

An adaptation pathways map shows different possible sequences of decisions to achieve objectives. A scorecard helps to evaluate the pathways and decisions.

- Transfer station to new policy action
- Adaptation Tipping Point of a policy action (Terminal)
- Policy action effective
- Decision node
- Adaptation signals based on signposts and trigger values

Haasnoot et al. 2013; Haasnoot et al. 2018 Glob. Env. Change, Haasnoot et al. 2019

Adaptation Tipping Points

How much change can a (portfolio) of measures address?
(thresholds, opportunities and limits)

Uncertainty in timing (when instead of if)

ANTARCTICA

Flood barriers will close more frequently and eventually overtop

- 1 m  closed 3 times per year
- 1.5 m  closed 30 times per year
- 1.2 m  design levels exceeded 1:10 years

- 1 m  closed 45 times per year
- 1.3 m  closed permanent
- 2.1 m  design levels exceeded 1:10 years

Haasnoot et al 2018 (in Dutch). Haasnoot et al (accepted) ERL

To what extent is sand nourishment flexible?

- 10 mm/year:

- 14 mm/year:

- 60 mm/year:

~2050

2070 - 2100

2100 ->

Adaptation pathways

How (much) to adapt under uncertainty?

= limits, thresholds opportunities

Adaptation tipping points: scenario neutral assessment

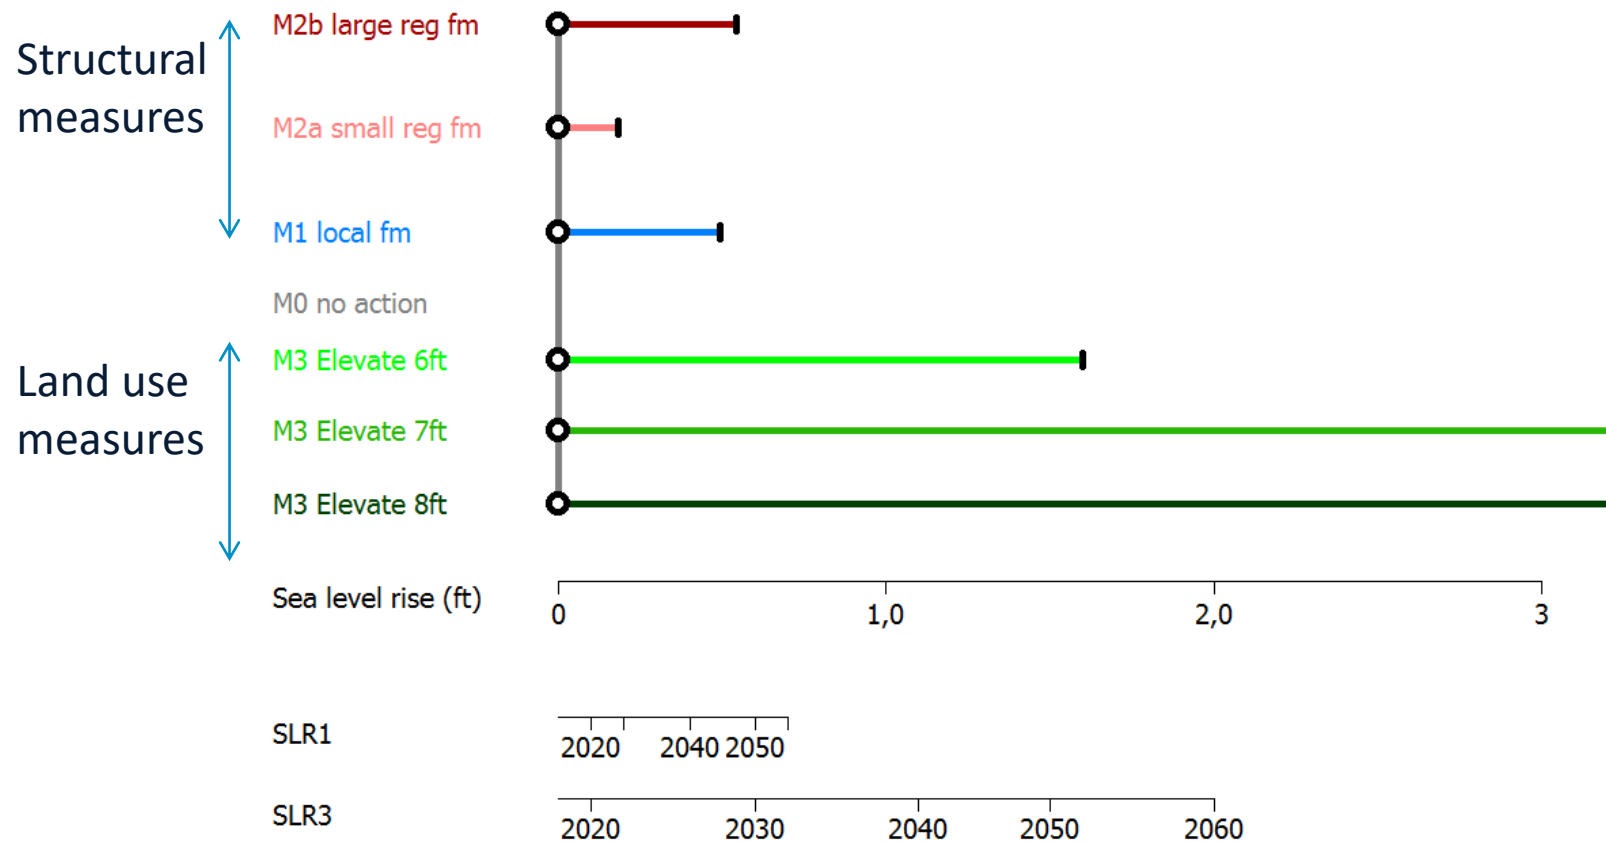

Expected Annual Damage (k\$)

Example adaptation to sea level rise Miami

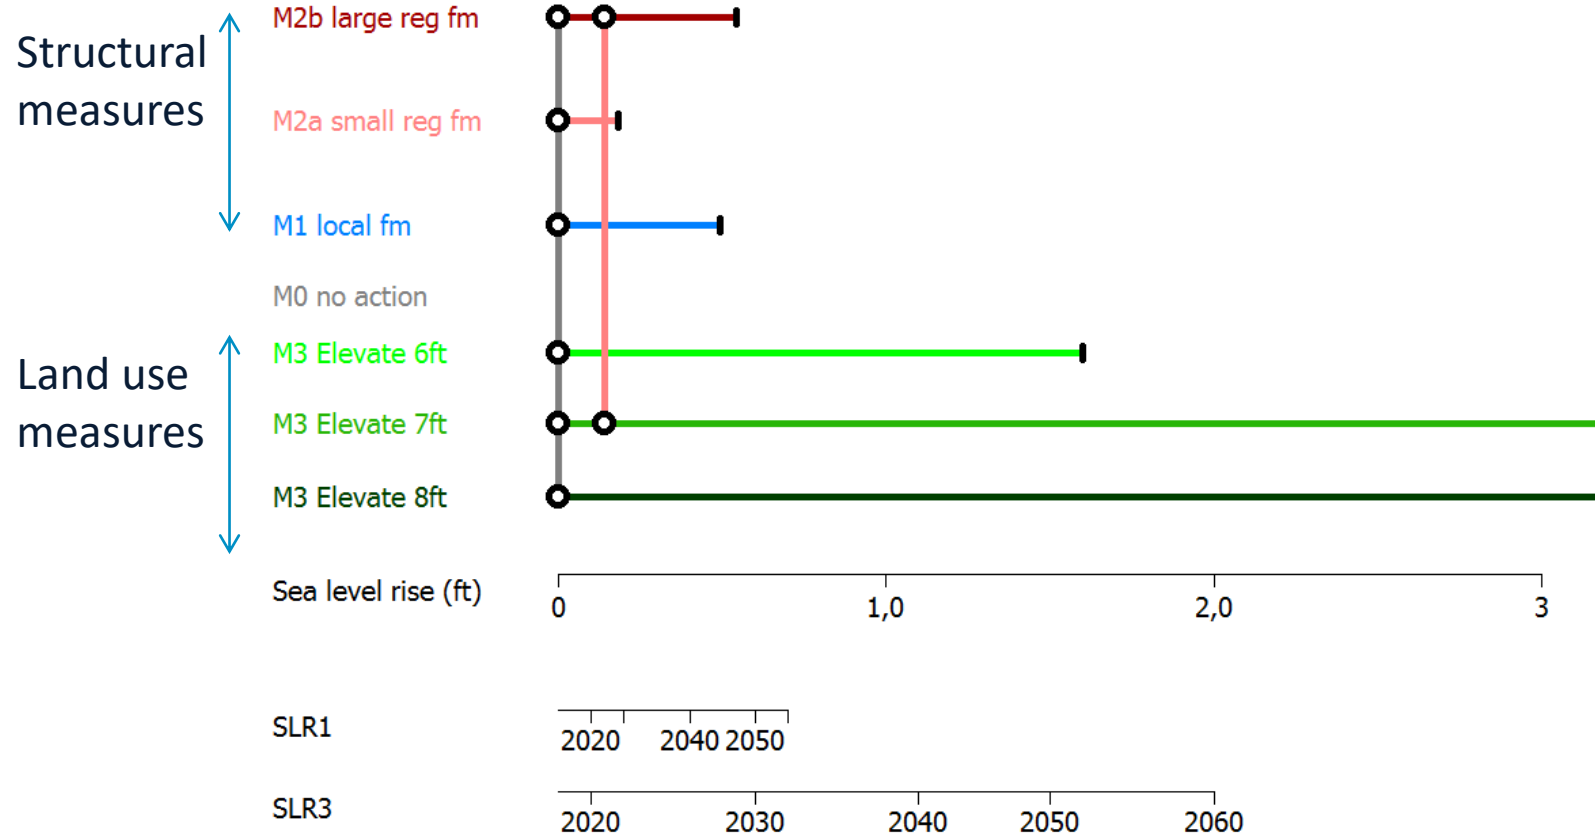

Adaptive plan based on adaptation pathways

Map generated with Pathways Generator, ©2015, Deltares, Carthago Consultancy

Adaptive plan based on adaptation pathways

Map generated with Pathways Generator, ©2015, Deltares, Carthago Consultancy

Adaptive plan based on adaptation pathways

- Land use measures are needed in the end
- Installing pumps can buy some time.

Map generated with Pathways Generator, ©2015, Deltares, Carthago Consultancy

Limits due to rate of change?

Functional life time of investments decreases:

adapt faster or larger

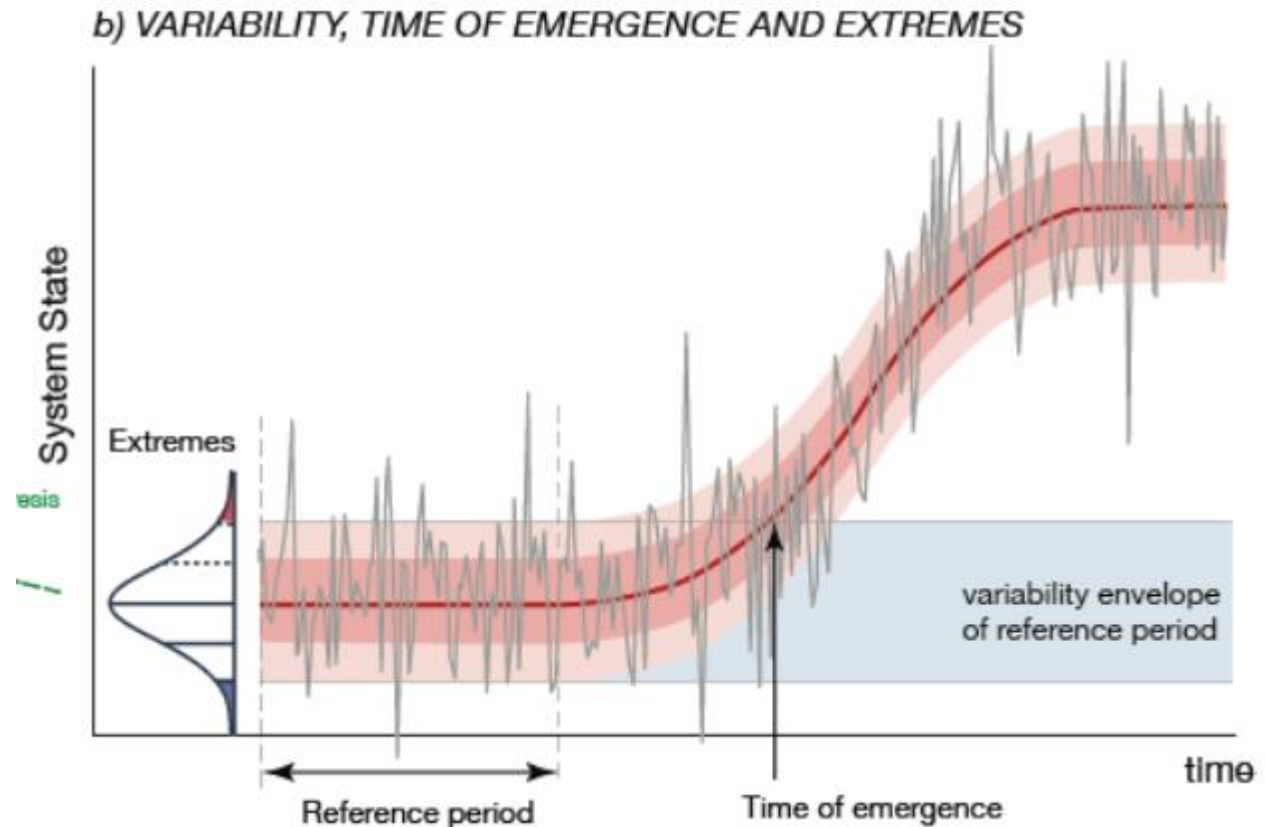

Haasnoot et al. 2018 <https://bit.ly/2OArzxX> (in dutch). Haasnoot et al. (accepted) ERL
Source SLR data: Le Bars et al 2017 ERL

Signals

When to implement or reassess the adaptive plan?
Monitoring, analysis and evaluation of early warning indicators

Monitoring to detect signals for implementation or adjustment

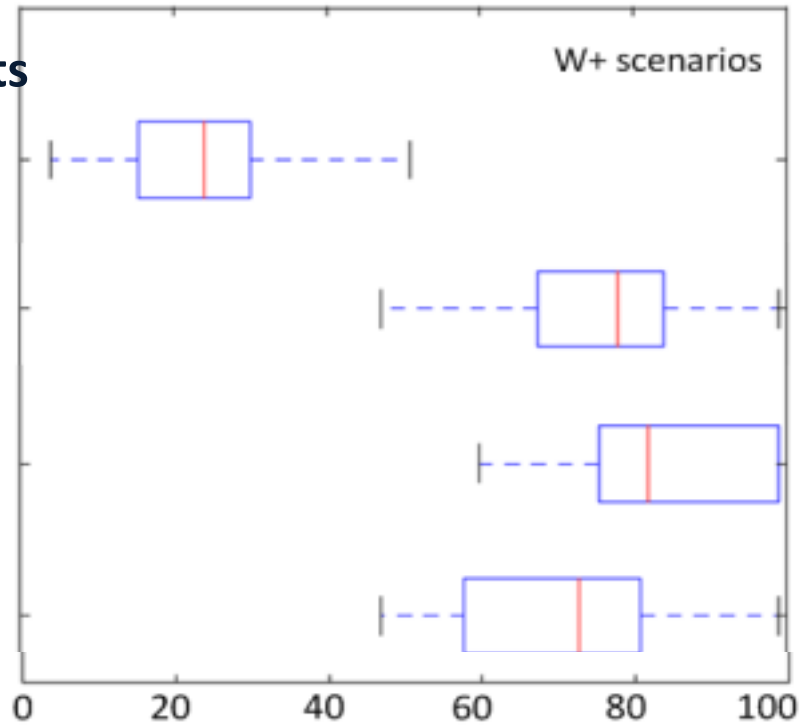

- Timely, reliable, convincing to act
- Trend, Rate, Time of emergence
- Observations and projections

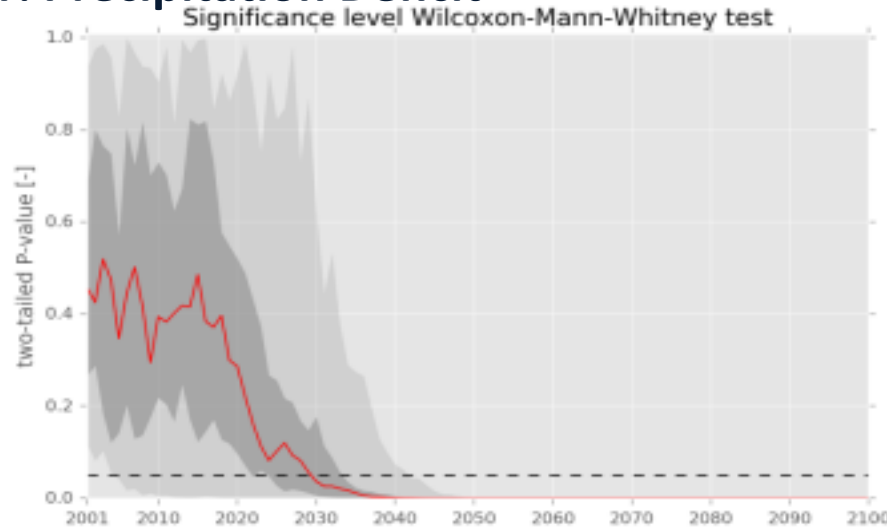

Hawkins and Sutton, 2012

Timing of Adaptation Tipping Points

Status quo
 Raise water level to +0.2m and raise dikes with 0.5 m
 Double discharge capacity
 Pump 500 m³/s

Early warning indicator: Precipitation Deficit

Significance (p-value) could be used to categorise the signal:

- <5% strong signal,
- 5-15% moderate signal,
- <25% weak signal

Summary

Decision services

- Adaptation tipping points to assess *if* and use scenarios to assess *when* limits, thresholds, opportunities may occur. Use amount and rate of change to assess them
 - Explore adaptation pathways → adaptive plan
 - Beyond 2100 for investments with long life time
- Climate services
- Low to high-end scenarios to assess incremental and transformative decisions, and consider lead time
 - Signal Monitoring System: timely, reliable, convincing. Not only about what to measure but also how to analyse
