

A GODAE OceanView International School "New Frontiers in Operational Oceanography"

2-13 October 2017, Mallorca, Spain

The implementation of operational oceanography in the past 15 years has provided many societal benefits and has led to many countries adopting a formal roadmap for providing ocean forecasts. Following on from the GODAE OceanView international schools held in France (Chassignet and Verron, 2006) and in Australia (Schiller and Brassington, 2011), this school will bring together senior experts and young researchers (pre- and post-doctorate) from across the world and expose them to the latest research in oceanography, specifically how it will impact operational oceanography. In addition to formal lectures, shorter talks by experts in the field will acquaint the participants with a wide range of applications.

Directors:

Ananda Pascual, IMEDEA (CSIC-UIB),
Esporles, Mallorca, Spain

Joaquin Tintoré, SOCIB & IMEDEA (CSIC-
UIB), Palma, Mallorca, Spain

Eric Chassignet, COAPS, Florida State
University, Tallahassee, USA

Jacques Verron, IGE, Grenoble, France
