

**Postdoctoral opportunity in Regional Land-Ecosystem-Climate Interaction Modelling
[Yonsei Univ, Seoul, Korea]**

A postdoctoral opportunity is available in the hydrology and eco-climate lab, Dep. of Civil and Environmental Engineering, Yonsei Univ, Seoul, South Korea (<http://hecl.yonsei.ac.kr>). We seek a recent PhD to participate in projects to understand the land-ecosystem-climate processes in the regions such as the East Asia (e.g., to better understand the drought processes in East Asia with using the regional-scale models and remotely-sensed data).

Applicants should have a doctoral degree in hydrology, atmospheric science, geography, or related disciplines by the time of starting the position. The applicants should be able to demonstrate experience and proficiency in land surface modelling and/or data assimilation techniques.

The position is available immediately. The appointment is full-time for one year and may be renewed for up to three years (two additional years) upon performance and availability of funds. For further details, please contact Prof. Y Kim (yeonjoo.kim@yonsei.ac.kr<<mailto:yeonjoo.kim@yonsei.ac.kr>>) with a cover letter and CV.
