

Professor of Spatial Water Quality and Aquatic Systems

Application Deadline: 7 November 2016

The Department of Water Resources at the University of Twente is now seeking a new Professor who will have a leading role in initiating, coordinating, and executing research and education activities in quantitative earth observation of inland and coastal water systems, with a focus on spatial water quality and biogeochemical cycles and budgets. The successful appointee will focus on the development and application of novel scientific methods and approaches in quantitative earth observation of water quality (retrieval of aquatic bio-geophysical parameters – with emphasis on biogeochemical cycles and budgets).
