## Description:

The traditional role of fire alarm systems is rapidly evolving. Now, the benchmark for fire alarm systems has changed to give designers, engineers, contractors, installers, and inspectors rules that reflect the current state of the field. An industry milestone, the 2016 edition of NFPA 72: National Fire Alarm and Signaling Code has the most advanced provisions ever developed for the application, installation, location, performance, and inspection, testing, and maintenance of fire alarm and emergency communications systems -- including Mass Notification Systems (MNS). A special task group on networks addressed the risk analysis, design, application, installation, and performance of networks and networking equipment in fire alarm systems, fire EVACS,

and MNS. As a result of their findings, NFPA 72 includes a new circuit designation called Class N pathways permitting the use of networks and Ethernet when interconnecting a fire alarm system. Other changes help you avoid the loss of critical coverage and ensure system interfaces function correctly, such as: Significant revisions in Chapter 21, Emergency Control Function Interfaces and Chapter 24, Emergency Communications Systems; Revisions to Level 2 and Level 3 pathway survivability requirements revised to provide greater flexibility of use and to address other "fire-resistive" methods; A new Annex on Guidelines for Emergency Communication Strategies for Buildings and Campuses. Hundreds of other revisions make the 2016 NFPA 72 indispensable. The 2016 edition of NFPA 72: National Fire Alarm and Signaling Code covers new ground from beginning to end. Order direct from NFPA, the Code source. (Softbound, 369 pp., 2016)
